## EDUCATION

### New Jersey Institute of Technology

Expected Dec 2026

Bachelor of Science in Computer Science

GPA: 3.4

- Relevant Coursework: Data Structures & Algorithms, Computer Networks, Database Systems, Systems Programming, Object-Oriented Programming, Software Design & Analysis, Discrete Structures

## EXPERIENCE

### Gomes Group

May 2026 – Present

*Operations & System Analyst*

*Newark, NJ*

- Developed Google Apps Script automations, Asana workflows, and reporting dashboards that streamlined leasing and property management operations, reducing manual processing time by 40%.
- Built integrations between Asana, Google Workspace, DocuSign, and internal property management systems, improving data visibility and reducing manual administrative work by 14%.
- Worked with executive leadership and property management, marketing, and community engagement teams to resolve technical issues and deliver company-wide automation initiatives.

### Victoria Solutions

Apr 2025 – Jun 2025

*Data Analyst Intern*

*Remote*

- Engineered Python and SQL ETL pipelines processing 50M+ rows daily, optimizing query execution and batch processing workflows to reduce ingestion latency by 38%.
- Shipped a RESTful API layer serving real-time analytics to internal dashboards, eliminating manual reporting cycles and improving decision turnaround by 30%.
- Built automated data validation infrastructure with Pandas and PostgreSQL, catching schema drift and data inconsistencies before they reached production.

### Applied Style NJ LLC

Jan 2023 – Feb 2025

*Software Engineer & Data Analyst*

*Edison, NJ*

- Shipped a production-grade authentication system and async order-tracking backend in Flask, handling live client data with security and reliability requirements.
- Owned full-stack development of internal dashboards (React, Flask, MySQL) that replaced manual reporting and surfaced real-time shop and project metrics.
- Scaled and hardened AWS EC2 cloud infrastructure with automated monitoring, error-logging pipelines, and observability tooling used daily by leadership.

## PROJECTS

[CrypticChat](#) | JavaScript, React, Node.js, Express, MongoDB, Socket.IO

Jan 2026

- Built a full-stack MERN messaging platform with JWT authentication, bcrypt password hashing, and one-to-one and group chats with admin controls.
- Implemented client-side AES-256 encryption with per-message IVs so message content is stored in MongoDB only as ciphertext.
- Engineered real-time features with Socket.IO, including typing indicators, read receipts, live presence, and disappearing messages powered by MongoDB TTL indexes.

[FinTrack](#) | React, Node.js, Express, PostgreSQL, Chart.js, JWT

Sep 2025 – Dec 2025

- Created a secure, full-stack personal finance dashboard to track income, expenses, budgets, and net worth in real time, using JWT-based authentication and RESTful APIs to protect sensitive user data.
- Developed responsive Chart.js dashboards integrated with REST APIs and PostgreSQL data, enabling real-time visualization of spending trends, cash flow, and net-worth analytics.
- Designed a backend using Node.js, Express, and PostgreSQL to manage transactions, accounts, and historical financial data while designing scalable database schemas and API endpoints for accurate reporting and efficient querying.

## TECHNICAL SKILLS

**Languages:** Python, Java, JavaScript, C++, SQL, Bash, C, TypeScript, HTML, CSS

**Frameworks & Libraries:** Node.js, Socket.IO, Flask, React, Express, Pandas, NumPy, Scikit-learn

**Developer Tools:** AWS, Linux, Git, GitHub, Figma, Docker, Postman, PowerShell, Tableau

**Databases:** PostgreSQL, MySQL, MongoDB, Supabase, Firebase
